

BRIGADE'S FUNCTIONS

- ✔ Continue the fight for public policy preservation, respect, and strengthening of climate change established by the United Nations Framework Convention.
- ✔ Encourage and support actions that promote climate justice and differentiated responsibilities in the international framework.
- ✔ Position Venezuela as a world reference in the fight for compliance with the established agreements and its drive for the new Eco-Socialist system construction.
- ✔ Coordinate actions to empower climate action.

BRIGADES AGAINST CLIMATE CHANGE

NATIONAL STRATEGY FOR CLIMATE EMPOWERMENT OF THE BOLIVARIAN REPUBLIC OF VENEZUELA

Venezuela
open to the future

BRIGADES AGAINST CLIMATE CHANGE

The Ministry of Popular Power for Ecosocialism (MINEC) is developing the Brigades Against Climate Change initiative, which promotes good environmental practices through recreational activities that lead to climate change mitigation and adaptation and environment defense, rehabilitation, and protection.

Therefore, the Brigades must have this north, high-quality coordination before any action is required for optimal and sustainable use of natural resources, respecting the processes and cycles of nature.

The Youth Brigades against Climate Change constitute a social movement at a national level for cultural transformation in front of the climate crisis, which brings together young people, who can generate actions that help us to raise awareness, educate, train, and act against the adverse effects of climate change, which occur because of the predatory capitalist model in the Bolivarian Republic of Venezuela.

MISSION

We oversee integrating young people into Brigades Against Climate Change, where the action of good environmental practices is the main objective, thus promoting citizens' participation in each community area and generating a multiplier effect in mitigation and adaptation to climate change within the entire national territory, thus being an example of commitment to our environment for other countries.

VISION

To be an operational force in the defense, rehabilitation, and protection of the environment throughout the national territory that guarantees optimal and sustainable use of natural resources, respecting the processes and cycles of nature, which helps in climate change mitigation and adaptation inside and outside the country.
